I deliver high-impact product design across fintech, healthtech, edtech and consumer services, where interface decisions carry real weight for onboarding, trust and conversion. Computer science background (BSc + MSc) brings systems thinking and genuine fluency with engineering teams. Strong foundation in user research, interaction design and design systems, with a sharp eye for typography, visual hierarchy, spacing and the craft details that define a polished, cohesive product. I use AI tools including Claude, Cursor and Figma Make to accelerate ideation and iteration, not replace the craft. I'm currently supplementing this with formal study in AI and data analytics through BrainStation, sharpening how I apply AI to real product problems in regulated fintech contexts.

KEY ACHIEVEMENTS

- **42% reduction** in onboarding drop-offs at SaveInGold by redesigning fragmented flows and bringing previously external KYC processes in-app.
- **40% reduction** in design-to-development handoff time at WPBrigade through a scalable, token-based component design system.
- **35% increase** in retention and a **25% increase** in premium conversions at WPBrigade from redesigned user journeys across widely-used, consumer-facing WordPress plugins.
- **13% increase** in B2B lead generation at SocialPro from a corporate website redesign focused on visual hierarchy and typography.
- **22% increase** in feature adoption at SocialPro by simplifying complex data visualisations into clear, actionable interfaces.
- Designed and built an **AI-powered lyric generator** end-to-end, UX, frontend and backend, for an MSc thesis, integrating a GPT-4 model fine-tuned on a 4,000-song dataset.

EXPERIENCE

MENA CAPITAL

Product Designer — Mar 2026 – Present
London, UK / Remote

- Leading UX for a complex post-trade fintech platform, designing workflows across client management, transactions and compliance (KYC).
- Took ownership of the visual design direction, defining typography scales, spacing systems and component hierarchy to bring legibility and clarity to high-density data interfaces.
- Simplified fragmented processes across multiple systems into unified, efficient user journeys, improving operational productivity.
- Created interactive Figma prototypes to validate solutions and align stakeholders before development.
- Partnered with product, engineering and compliance to ensure alignment with regulatory and business requirements.

SAVEINGOLD

Product Designer — Jan 2025 – Feb 2026
London, UK / Remote

- Led the end-to-end redesign of a consumer fintech mobile app across iOS and Android, owning the work from research and discovery through visual design, delivery and developer handoff.

SKILLS & CAPABILITIES

Product design

Interaction design, prototyping, visual design, user research, usability testing, information architecture, microinteractions, accessibility (WCAG).

Design systems

Figma (Auto Layout, Variants, Tokens), component libraries, type scales, spacing grids, design–engineering handoff, cross-platform consistency.

Working with code

React, Tailwind CSS, HTML/ CSS, Django, used for prototyping and full-stack projects.

AI & prototyping

Cursor, Claude, Figma Make, Google AI Studio, Lovable, Bolt, GPT-4 integration.

- Defined the visual language of the app: type scale, colour system, iconography, component states and motion, ensuring a consistent, polished experience across platforms.
- Reduced onboarding drop-offs by **42%** by redesigning fragmented flows and integrating previously external processes into seamless in-app experiences.
- Worked closely with engineering through implementation to keep design intent intact, pushing on spacing, typography and visual detail until the shipped product matched the spec.
- Conducted user research, UX audits and stakeholder interviews to shape design strategy and identify the highest-impact pain points.
- Collaborated with compliance and engineering to deliver accessible, regulation-aligned solutions.

SOCIALPRO

Product Designer — Jun 2024 – Dec 2024

London, UK / Remote

- Took full ownership of design across web and SaaS platforms, from visual direction and concept through prototyping and developer handoff.
- Redesigned the corporate website, achieving a **13%** increase in B2B lead generation through improved visual hierarchy, typography and journey structure.
- Simplified complex data visualisations, increasing feature adoption by **22%**, applying typographic clarity, colour logic and layout structure to make data-heavy interfaces intuitive.
- Worked closely with engineering to ensure smooth, accurate implementation with fidelity to the visual design intent.
- Partnered with product stakeholders to align on business goals and shape a coherent design direction across platforms.

WPBRIGADE

UX Designer — Sep 2021 – May 2024

Sialkot, Pakistan

- Built and maintained a scalable, component-based design system, establishing token architecture, a comprehensive type scale, spacing grid, colour system and naming conventions, reducing design-to-development handoff time by **40%**.
- Redesigned user journeys for widely-used WordPress plugins (large consumer-facing products), increasing retention by **35%** and premium conversions by **25%**.
- Led A/B testing initiatives to validate design decisions and measurably improve feature adoption and revenue outcomes.
- Worked cross-functionally with developers and product stakeholders to deliver consistent, scalable, accessible experiences.

Collaboration

Cross-functional partnership, stakeholder management, Agile/Scrum, Jira, Notion, FigJam, Miro.

COMMUNITY

Community Support Lead, FAUX

Ongoing

Support the organisation of FAUX (Food & UX), a monthly design events community across the UK, helping shape programming and community reach alongside the founder's leadership group.

SECTORS

Fintech, healthtech, edtech, social procurement and consumer services.

FEATURED PROJECT

AI-Powered Lyric Generator

End-to-end design and build, MSc Thesis

Owned the project end-to-end, UX, frontend and backend, taking it from problem framing to a working product. Designed the mobile experience in Figma, mapping prompting flows and running usability tests to refine the interaction model for a novel AI-driven workflow. Built the cross-platform frontend in Flutter and backend in Django, integrating a GPT-4 model fine-tuned on a 4,000-song dataset for contextual relevance.

EDUCATION

AI in Data Analytics

BrainStation

In Progress

MSc Computer Science

Anglia Ruskin University, Cambridge

2023 – 2024

BSc Computer Science

University of Gujrat, Sialkot

2017 – 2021
